RETRACTABLE LIFE LINE

## Description

15 m length retractable lifeline, manufactured with high impact polymer casing and stainless-steel cable of 3/16 inch (4.8mm diameter)

## General Information

-Retractable lifeline PE-15S is part of the Personal Fall Arrest System and its use is recommended when carrying out work at heights. (according to requirements established by Colombian Government law, resolucion 1409 de 2012).

-This equipment is especially used as a part of Fall Arrest System, reducing the force of vertical impact on the body by limiting fall distance.

-This equipment is one person use only.

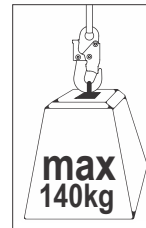

-The connector for the PE-15S model complies EN 362 requirements and incorporate a swivel device used in the connection with the user.

-This equipment complements all EPI Fall Protection System products.

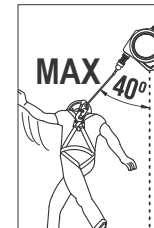

**Safety Carabiner**  
carabiner made of heavy-duty steel with triple action self-closing device and 17mm opening, which allows safe connection to the fall arrest system.

**Label and Protective casing**  
The label contains details product number, technical data and use information. The casing is made of a resistant and low weight polymer, protecting the internal mechanisms.

**¾ Safety hook**  
Swivel hook with double safety system and 25mm opening to carry out connection with dorsal ring of the harness.

Maximum weight allowed: 140 kg.

maximum angle from vertical axis: 40°

Do not use horizontally.

**Steel cable**  
Stainless steel cable of 7x19 and 4.8mm diameter.

EN 360:2002  
**RETRACTABLE LIFE LINE**  
certificado N° GB/PP 234811
